

YOUR UNDERFLOOR SHIELD AGAINST THE COLD.

Earthwool® Floorshield underfloor insulation with a wind-wash barrier.

If you've got timber floors, you'll know they can be draughty and cold in the winter. But you can beat the winter chills, and save energy and money, by installing underfloor insulation from Earthwool® - it's easy. The secret to it's performance is the wind-wash barrier, a lining that makes sure the insulation isn't affected by air movement.

It keeps the thermal temperature at its optimum level, leading to a more consistent heating and cooling result throughout your home, and can make a real difference to your energy bills all year round.

The wind-wash barrier guards against air movement keeping a more consistent temperature inside your home.

EARTHWOOL®

YOUR UNDERFLOOR INSULATION IS UNDER CONTROL WITH FLOORSHIELD

Great for colder climates or high sub-floor areas where large thermal losses may occur, Earthwool® Floorshield underfloor insulation is easy to fit under exposed timber floors. Simply friction fit between the floor joists and then staple strapping to hold insulation in place.

You can see full installation how-to videos at earthwool.com.au
